PEARCE SCOTT ARCHITECTS

### *What is your architectural philosophy?*

Pearce Scott Architects is a small, homegrown architecture firm that guides clients through the design experience without ego. We work with clients to bring the vision of their project to life by creating spaces that are intimately suited to their needs.

### *For this project, how did you achieve the goals of the homeowner?*

We worked closely with the homeowner, who was also the builder for the project, in fleshing out their conceptual idea of designing a structure that would look and feel like an old, existing barn that was now being repurposed for residential use.

### *Tell us about the architectural features on the exterior.*

We used heavy timber columns on the first floor with tabby stucco infill and expansive French doors to give the appearance of an open barn that had its ground, or threshing, floor, enclosed for the common spaces of the kitchen, living and dining. The upper floor was clad in charred wood siding and the roof was finished in corrugated metal, all to enhance the rustic feeling of an older structure with a new life within.

### *Tell us about the architectural features on the interior.*

The building's heavy timber structure was exposed on the interior, and the two wings on the upper floor containing multiple bedrooms and bathrooms were connected by an open bridge structure with a floating steel stair below.

For more information, call Pearce Scott Architects at (843) 837-5700 or visit [pscottarch.com](http://pscottarch.com).

**(above)** The exterior is tabby stucco in between heavy timber with a corrugated metal roof for a rustic barn-like appearance.
